

# Disability Evaluation Under Social Security

**\*12.04 Affective disorders:** Characterized by a disturbance of mood, accompanied by a full or partial manic or depressive syndrome. Mood refers to a prolonged emotion that colors the whole psychic life; it generally involves either depression or elation.

The required level of severity for these disorders is met when the requirements in both A and B are satisfied, or when the requirements in C are satisfied.

A. Medically documented persistence, either continuous or intermittent, of one of the following:

1. Depressive syndrome characterized by at least four of the following:
  - a. Anhedonia or pervasive loss of interest in almost all activities; or
  - b. Appetite disturbance with change in weight; or
  - c. Sleep disturbance; or
  - d. Psychomotor agitation or retardation; or
  - e. Decreased energy; or
  - f. Feelings of guilt or worthlessness; or
  - g. Difficulty concentrating or thinking; or
  - h. Thoughts of suicide; or
  - i. Hallucinations, delusions, or paranoid thinking; or
2. Manic syndrome characterized by at least three of the following:
  - a. Hyperactivity; or
  - b. Pressure of speech; or
  - c. Flight of ideas; or

- d. Inflated self-esteem; or
- e. Decreased need for sleep; or
- f. Easy distractibility; or
- g. Involvement in activities that have a high probability of painful consequences which are not recognized; or
- h. Hallucinations, delusions or paranoid thinking; or

3. Bipolar syndrome with a history of episodic periods manifested by the full symptomatic picture of both manic and depressive syndromes (and currently characterized by either or both syndromes);

AND

B. Resulting in at least two of the following:

- 1. Marked restriction of activities of daily living; or
- 2. Marked difficulties in maintaining social functioning; or
- 3. Marked difficulties in maintaining concentration, persistence, or pace; or
- 4. Repeated episodes of decompensation, each of extended duration;

OR

C. Medically documented history of a chronic affective disorder of at least 2 years' duration that has caused more than a minimal limitation of ability to do basic work activities, with symptoms or signs currently attenuated by medication or psychosocial support, and one of the following:

- 1. Repeated episodes of decompensation, each of extended duration; or
- 2. A residual disease process that has resulted in such marginal adjustment that even a minimal increase in mental demands or change in the environment would be predicted to cause the individual to decompensate; or

3. Current history of 1 or more years' inability to function outside a highly supportive living arrangement, with an indication of continued need for such an arrangement.
